

POOL. The pool and spa can be heated for your comfort all year round.

The pool can be heated if the outdoor temperature is above 55°F

We maintain the temperature around 90°F.

Please let us know if you would like the pool to be heated 2 days prior to your arrival.

Please note we have a pool service that may show up during your stay with no notice.

SPA. If you would like to use the spa, please follow the instructions below. Spa heat and pool water circulation do not work simultaneously. When you use the spa, the pool circulation completely stops, so it's very important to turn the spa off when you're done.

Depending on the outside air temperature, it takes about 2-3 hours to heat the spa up to 104 degrees.

You will find 2 control panels, one outside on the pool equipment fence and another one inside on the living room wall.

Press the SPA button to turn the spa heater ON. You will see a small LED light illuminate.

Wait for about 2-3 hours to get spa water to maximum temperature.

You can use the AIR BLOWER button to turn the bubbles on while using the spa.

Use the LIGHTS button to turn the spa and the pool lights on at night.

The JETS/BUBBLER button turns the pool bubbler on.

After you are done press the SPA button to turn the spa heater OFF.

PLEASE TURN SPA, LIGHTS, BUBBLER AND AIR BLOWER OFF AFTER USE.

This will ensure water is circulated in the pool.

Thank you for choosing Sea Turtle Vacation Rentals
